1.1 META-PROMPT (Main Prompt)

You are an AI coding assistant. I want you to generate clean, production-ready HTML with Tailwind CSS for different website sections. Follow these rules strictly:

1. The design must always be modern, minimal, and visually balanced.
2. Use proper spacing, alignment, and clear typography hierarchy.
3. All sections must be fully responsive on both desktop and mobile.
4. Use only semantic HTML elements like <nav>, <header>, <section>, and <footer>.
5. Use a consistent design system: white background, slate/gray text, and indigo highlight color.
6. Use Tailwind utility classes directly without custom CSS files.
7. Icons should be simple inline SVGs or Heroicons.
8. Avoid unnecessary divs, unnecessary classes, or extra complexity.
9. Do not add external JavaScript libraries. Use small inline JS only where needed (like mobile navbar toggle).
10. Every section must visually match the others as if they are part of one clean professional website.
11. The output must always be just HTML + Tailwind classes with no explanation.

I will give you section names like Navigation Bar, Hero Section, Services Section, Contact Form, and Footer.
For each section, generate a clean and consistent UI according to these rules.

1.2 Prompt – Navigation Bar

Using the meta-prompt I gave you earlier, generate ONLY the Navigation Bar section for a modern website.

Requirements:

1. Structure:
   - Use a semantic <nav> element wrapped in a <header>.
   - The navbar should be full-width and centered inside a max-width container.
   - Use a brand/logo text on the left and navigation links on the right.

2. Brand:
   - Brand name: "NovaStudio".
   - Use slightly bolder, larger text for the brand.
   - The brand should be a simple text link to "#".

3. Menu Items:
   - Use these links: "Home", "Services", "About", "Contact".
   - Each should be an <a> tag with href pointing to section IDs: "#home", "#services", "#about", "#contact".

4. Responsiveness:
   - On desktop (md and above):
     - Show the links inline horizontally.
     - Align brand on the left and links on the right using flexbox.
   - On mobile (below md):
     - Show a hamburger button (3 lines icon) on the right.
     - The menu links should be hidden by default and slide down / appear when the hamburger is clicked.
     - Use minimal JavaScript to toggle a hidden class (no external libraries).

5. Styling (Tailwind CSS only):
   - Background: white with a soft bottom border or shadow.
   - Use a max-width container (e.g., max-w-6xl mx-auto px-4).
   - Height: slightly padded (py-3 or py-4).

- Use flex, gap, and items-center for neat alignment.
        - Text color: neutral/slate tones, hover color slightly darker or indigo.
        - Navigation links should have hover states (e.g., underline, text-indigo-600, or subtle background).

6. Mobile Menu:
        - The menu should be in a <div> that can be toggled using JavaScript.
        - When visible on mobile, show links stacked vertically with comfortable padding.
        - The mobile menu should not affect desktop layout.

7. Code Output:
        - Use Tailwind utility classes directly on HTML elements.
        - Include a small <script> block at the bottom of the snippet to handle the hamburger toggle by adding/removing the "hidden" class.
        - Do NOT include <html>, <head>, or Tailwind CDN here. Only provide the <header> / <nav> and the necessary script.
        - Do not add any explanation text, only the code.

1.3 Prompt – Hero Section

Using the same rules from the meta-prompt, generate ONLY the Hero Section for the homepage of the website.

Context:
- Brand: "NovaStudio"
- Type: A modern digital design studio / agency landing page.

Requirements:

1. Structure:
        - Wrap the hero in a <section> with id="home".
        - Use a max-width container (e.g., max-w-6xl mx-auto px-4) and generous vertical padding (e.g., py-16 or py-20).
        - Use a responsive two-column layout:

- Left: text content (headline, subtext, CTAs).
- Right: image/illustration placeholder.

2. Text Content:
   - Headline: a short, strong, benefit-driven line. Example vibe: "Design that feels clean, modern, and trustworthy."
   - Subtext: 2–3 lines explaining what NovaStudio does (UI design, landing pages, branding).
   - Include 2 buttons:
     - Primary CTA: "Get a Free Consultation"
     - Secondary CTA: "View Portfolio" (styled as outline or ghost button).

3. Layout & Responsiveness:
   - On desktop (md and above):
     - Use flex or grid to place text on the left and image on the right.
   - On mobile:
     - Stack content: text first, image below.
   - Make sure the section is vertically spaced enough so it feels like a proper hero.

4. Image / Illustration:
   - On the right side, include a simple card-style placeholder for an image:
     - Use a rounded, subtle shadow box that could represent a screenshot or illustration.
     - Inside the box, add a small text like "Project preview" and 2–3 small bars/blocks to mimic UI elements.
     - Do NOT use a real <img> source; just build it with divs and Tailwind so it still looks decent without external assets.

5. Styling (Tailwind):
   - Background: plain white.
   - Headline: large, bold (e.g., text-3xl or text-4xl on desktop), tracking-tight.
   - Subtext: softer color (text-slate-600), max-width around 40–45rem.

```
    - Buttons:
      - Primary: indigo background, white text, rounded-full or
rounded-lg, proper padding, hover state.
      - Secondary: transparent or white background, border,
text-slate-700, hover with subtle background.
    - Maintain consistent color palette with the navbar.

6. Code Output:
    - Only return the <section> for the hero with all its child
elements.
    - Do NOT include <html>, <head>, or Tailwind CDN.
    - Do NOT include any explanatory comments or text, only the code.
```

1.4 Prompt – Services / Features Section

```
Using the same rules from the meta-prompt, generate ONLY the Services
/ Features section for the website.

Context:
- Brand: "NovaStudio"
- Type: Digital design studio / agency.

Requirements:

1. Structure:
    - Wrap everything in a <section> with id="services".
    - Use a max-width container (e.g., max-w-6xl mx-auto px-4).
    - Add a centered section heading and subheading at the top.

2. Section Heading:
    - Title example vibe: "Services designed to move your product
forward."
    - Short subtext (1–2 sentences) explaining what kind of work
NovaStudio does (UI/UX design, landing pages, product design,
branding).

3. Services Layout:
```

- Show 3 to 6 service cards.
   - Each card should have:
     - A small icon or visual marker at the top (simple inline SVG or a colored circle with an initial).
     - Service title (e.g., "Landing Page Design").
     - Short description (2–3 lines).
   - Use a responsive grid:
     - On mobile: 1 column.
     - On small screens: 2 columns.
     - On larger screens: 3 columns if there are enough items.

4. Styling (Tailwind):
   - Background: very light gray or white (e.g., bg-slate-50 for the section, white cards).
   - Cards:
     - Use rounded-xl or rounded-2xl.
     - Add subtle border and shadow (e.g., border-slate-200, shadow-sm).
     - Add padding inside (p-5 or p-6).
     - Use hover effect: slightly lift or darken border (e.g., hover:-translate-y-0.5, hover:shadow-md, transition).
   - Icons:
     - Simple rounded circle or square with indigo background and white icon or letter.
   - Text:
     - Keep headings around text-lg font-semibold.
     - Descriptions in text-sm or text-base with text-slate-600.

5. Content Ideas:
   - Example services:
     - "Product UI Design"
     - "Marketing Landing Pages"
     - "Design Systems & Styleguides"
     - "Dashboard & SaaS Interfaces"
     - "Branding & Visual Identity"
     - "Prototype & Interaction Design"

6. Code Output:

- Only return the <section> for the services and its children.
- Do NOT include <html>, <head>, or Tailwind CDN.
- Do NOT add explanations or comments — just the HTML with Tailwind classes.

1.5 Prompt – Contact / Lead Form Section

Using the same rules from the meta-prompt, generate ONLY the Contact / Lead Form section for the website.

Context:
- Brand: "NovaStudio"
- Goal: Let potential clients send a project inquiry.

Requirements:

1. Structure:
   - Wrap the whole section in a <section> with id="contact".
   - Use a centered max-width container (e.g., max-w-4xl mx-auto px-4).
   - Include a short heading and subtext above the form.
   - The form should be inside a card-style container.

2. Form Fields:
   The form should include these fields with proper labels and placeholders:

   - Full Name (text, required)
   - Email Address (email, required)
   - Project Type (select dropdown, required)
       - Options like: "Website UI", "Landing Page", "Dashboard / SaaS", "Branding", "Other"
   - Budget Range (select or text, optional but recommended)
       - Example options: "< $500", "$500 - $1500", "$1500 - $3000", "$3000+"
   - Message / Project Details (textarea, required, at least 3 rows)
   - A small consent checkbox:

- Label text like: "I agree to be contacted by NovaStudio about this inquiry."

3. Layout:
    - Use a simple card with rounded corners, border, and padding.
    - On larger screens, you can place some fields side-by-side using grid or flex (for example, name + email, project type + budget).
    - On mobile, all fields should stack vertically with good spacing.

4. Basic Validation Structure:
    - Use HTML5 validation attributes:
      - required on necessary fields
      - type="email" for email
    - Add aria-labels or associate labels properly using for/id.
    - You do NOT need to implement full JS validation logic; HTML5-level is enough.

5. Styling (Tailwind):
    - Section background: white or very light gray (e.g., bg-white).
    - Card:
      - Rounded-xl or rounded-2xl
      - border-slate-200 and shadow-sm
      - Padding (p-6 or p-8)
    - Labels:
      - Use small, medium-weight labels (text-sm font-medium text-slate-700).
    - Inputs, selects, textarea:
      - Full width
      - Rounded-md
      - border-slate-300
      - focus:ring-indigo-500 and focus:border-indigo-500
      - text-sm or text-base
      - spacing between fields (space-y-4 or gap-4).
    - Submit button:
      - Text: "Submit Inquiry"
      - Use indigo background, white text, rounded-full or rounded-lg, hover state.

6. Extra Content:
   - Under the heading, add a short line like:
     - "Share a bit about your project and we'll get back to you within 1–2 business days."
   - Optionally, show a small note below the form about not sharing spam, something friendly.

7. Code Output:
   - Only return the <section> with the heading and <form> inside it.
   - Do NOT include <html>, <head>, or Tailwind CDN.
   - Do NOT include any comments or explanations — just HTML with Tailwind classes.

1.6 Prompt – Footer Section

Using the same rules from the meta-prompt, generate ONLY the Footer section for the website.

Context:
- Brand: "NovaStudio"
- Type: Digital design studio / agency landing page.

Requirements:

1. Structure:
   - Wrap everything in a <footer> element.
   - Use a max-width container (e.g., max-w-6xl mx-auto px-4).
   - Include:
     - Brand / logo text.
     - A small navigation list.
     - Social icons row.
     - Copyright line.

2. Layout:
   - On desktop:
     - Use a 3-column or flex layout:
       - Left: brand and short tagline.
       - Middle: quick links.

- Right: contact + social icons.
   - On mobile:
      - Stack vertically with good spacing (gap-6 or similar).
   - Add a subtle border-top to separate the footer from the page.

3. Content:
   - Brand block:
      - Title: "NovaStudio"
      - One-line description: e.g., "A small digital design studio crafting clean product interfaces."
   - Links block:
      - Use a heading like "Navigation".
      - Links: Home (#home), Services (#services), About (#about), Contact (#contact).
   - Contact block:
      - Email like: hello@novastudio.design
      - City placeholder: "Remote · Worldwide"
   - Social icons:
      - Use simple inline SVG icons (e.g., for Dribbble, Behance, Twitter/X, LinkedIn).
      - Each wrapped in an <a> with href="#".

4. Styling (Tailwind):
   - Background: slightly tinted, e.g., bg-slate-950 text-slate-200 OR bg-slate-900.
   - Use padding: py-10 or py-12.
   - Text:
      - Headings: text-sm font-semibold uppercase or tracking-wide.
      - Body: text-sm with softer color (text-slate-400).
   - Links:
      - Use subtle hover: text-indigo-400 or underline on hover.
   - Social icons:
      - Circular buttons or simple icons with hover opacity change.

5. Bottom Bar:
   - Add a thin line or subtle separation.
   - Show copyright text like:
      - "© 2025 NovaStudio. All rights reserved."

6. Code Output:
   - Only return the <footer> with all its contents.
   - Do NOT include <html>, <head>, or Tailwind CDN.
   - Do NOT include comments or explanations — just HTML with Tailwind classes.

---

2. Combined `index.html` (Final Design Page)

```html
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="UTF-8" />
    <title>NovaStudio · Digital Design Studio</title>
    <meta name="viewport" content="width=device-width, initial-scale=1" />
    <!-- Tailwind CDN -->
    <script src="https://cdn.tailwindcss.com"></script>
  </head>
  <body class="bg-slate-50 text-slate-900">
    <!-- NAVBAR -->
    <header class="border-b border-slate-200 bg-white">
    <nav class="max-w-6xl mx-auto px-4 py-3 flex items-center justify-between">
